

## MODIFICATION KITS FOR SLUKA LK-2 and LK-2M

**Airhero** has developed a comprehensive set of modification kits with huge impact on performance and appeal of the Sluka LK-2. For simple, easy assembly, Airhero provides each kit with detailed instructions, drawings and installation tips that take you from the ground up. Each kit is compatible with all former types of the Sluka Aircraft and have been thoroughly tested for quality and performance.

---

### **Propulsion - Save weight and add performance!**

Airhero has worked tirelessly to find a suitable replacement for the original Rotax 447 engine. We found that the brand new Hirth F23 LW engine far surpasses all competition when it comes to price, weight, performance and reliability in Ultralight Aircraft. This alternate engine requires changing the mount, propeller and the exhaust system, which our kit provides the means for.

---

### **Rescue system - Always good to have a parachute!**

In cooperation with Galaxy Co., Airhero has designed a dedicated rescue system that fits perfectly to your Sluka. It is installed between the wings, and has a minimal impact on the aerodynamics and looks. The kit contains all the parts, and instructions necessary to attach this „Second Chance“ to your Sluka.

---

### **Wingtips - Improve performance and look!**

If you need new wing covers, look no further! This kit contains a set of Dacron® covers for the wings and ailerons. Included are two sleek composite wingtips that give the Sluka better aerodynamic performance and cool, modern look. Installation of this kit reduces stall speed and drag yielding in much better short field performance, less fuel burn and increased safety.

## Tail Feathers - Everlasting Tail Feathers!

If the good old cloth tail covers of your Sluka have exceeded their lifespan and you are about to replace them, consider Airhero's new and innovative composite Tail Feathers. Forever lasting and good looking, they won't let you down! The kit comes with the stabilizers, control surfaces and attachment brackets, all unpainted. The edges are protected by rubber profiles minimizing any damage that might occur in the hangar.

## Electric system - Upgrade to electricity!

Forget the recoil starter! Modern electric ignition, light lithium battery, and new instrument panel over the head of the pilot are the way of the future! Our kit includes all necessary wires, circuit breakers, and indicators to bring your Sluka to the cutting-edge overhead panel.

## Fuel System – Unmount & Go!

Too short flights getting you down? Replace your fuel tank and enjoy the safer, longer flight. This kit offers a new 30 L fuel tank made from anistatic plastic including new tubing and fuel level indicator system. The tank is detachable, so you can easily take it and get gas without taking the whole plane along with you!
